

PAIRING MIDI (only one device at a time can be connected to a piano):

STEP 1:

- Make sure the piano is updated to the latest version (visit www.roland.com and search your model, then choose "downloads").
- Make sure the device you are using has the latest version of Piano Partner 2 through apple

STEP 2:

- Do NOT use the "MIDI + Paged Turning" setting, just use "MIDI" or "Page Turn", they run smoother when run separately
- Note: Unless the piano is set to factory reset, the piano will remember this setting. If you do a factory reset, you will have to adjust this setting before pairing.

STEP 3:

- Launch Piano Partner 2
- Go to the "settings" menu (the little gear, top right corner), and from the drop-down menu and touch "BLUETOOTH MIDI DEVICE"
- From the next list that appears, find the piano you want to pair with
- "Would you like to Pair with instrument selected" and answer "Pair"
- You should now be connected and you can confirm that on the lower left corner of the Piano Partner 2's Home Screen, as it will say, "Connected to instrument"

PAIRING AUDIO:

STEP 1:

- Open your Settings on your handheld or tablet device
- Open your Bluetooth on your handheld or tablet device
- turn your Bluetooth on

STEP 2:

- On Piano: Press the Ambience and Brilliance buttons at the same time to access the piano's Functions screen
- Use the arrow buttons to the right of the screen on the piano to find page "4" of the Functions screens
- Press the "play/stop" button to enter a new screen
- Press the "play/stop" button to start the pairing

STEP 3:

- On device, in your Bluetooth screen, wait to see the "instrument" then touch to pair (it should show up under the lower section of screen "Other Devices")

ONCE PAIRED: As long as you haven't reset your phone or bought a new device, now this instrument will show up on your devices Bluetooth screen under "My Devices" To make sure you're device is connected to the instrument, you will just open the Bluetooth screen on your device and select the instrument, then it will connect.

TROUBLE SHOOTING IF PROBLEMS CONNECTING:

- Forget device under Bluetooth screen on your handheld/tablet and try pairing process again
- Reboot your phone/tablet and try process again
